ABOUT THE GAME

Fake Snake is a planning puzzle game where one movement sequence controls multiple snakes simultaneously across different boards. You plan a route, commit to it, and all snakes execute the same steps in their own environments at once.

The challenge: each board is different. Walls, exits, and obstacles sit in different positions. A move safe on one board may doom another snake. Board rotations shift the meaning of "up" mid-sequence. Focus Moves let you apply a single step to just one snake — used wisely, they unlock otherwise impossible solutions.

Includes handcrafted puzzles, optional 3-star challenges, a built-in level editor, full gamepad support (Xbox / PlayStation), and planned Steam Workshop community levels.
